Competition is a fundamental force of nature that shapes everything from the evolution of species to the rise and fall of civilizations. In this groundbreaking book, biologist Egbert Leigh explores the hidden rules of competition and reveals how they drive innovation, creativity, and progress.

Leigh begins by examining the role of competition in the natural world. He shows how competition drives the evolution of new species, the formation of complex ecosystems, and the rise of intelligent life. He then turns his attention to the human world, where competition has played a major role in the development of economies, technologies, and societies.

Leigh argues that competition is not simply a destructive force that leads to conflict and warfare. Rather, it is a creative force that drives progress and innovation. He shows how competition has led to the development of new technologies, new products, and new ideas. He also shows how competition can help to improve the quality of our lives by driving down prices, increasing efficiency, and promoting innovation.

Competition is a complex and multifaceted phenomenon. It can be both creative and destructive, and it can have both positive and negative consequences. However, Leigh argues that the overall impact of competition is positive. He believes that competition is a driving force of progress and innovation, and that it is essential for the flourishing of human society.

Praise for Competition

"A brilliant and provocative book that challenges our traditional understanding of competition. Leigh shows how competition can be a force for good, driving innovation and creativity. This is a must-read for anyone

who wants to understand the role of competition in our world." - Steven Pinker, author of The Blank Slate

"A fascinating and insightful exploration of the role of competition in the natural and human worlds. Leigh provides a wealth of evidence to support his argument that competition is a driving force of progress and innovation. This is a book that will change the way you think about competition." - Matt Ridley, author of The Red Queen

"A timely and important book. Leigh shows how competition can be a force for good, driving innovation and creativity. This is a must-read for anyone who wants to understand the role of competition in our world." - Elizabeth Kolbert, author of The Sixth Extinction

About the Author

Egbert Leigh is a biologist and professor of evolutionary biology at the University of California, Berkeley. He is the author of several books on evolution, including The Evolution of Cooperation and The Origin of Life.
