

# Everything Else in the Universe: A Journey Through the Cosmos

We are all made of star stuff. The atoms that make up our bodies were forged in the hearts of stars billions of years ago. And the energy that powers our lives comes from the sun, a star that is just one of billions in our galaxy. But what is our place in the universe? Are we alone? And what is the ultimate fate of our cosmos?

In *Everything Else in the Universe*, renowned astrophysicist Neil deGrasse Tyson takes us on a cosmic journey to explore these questions and more. From the Big Bang to the distant future, Tyson weaves a captivating narrative that illuminates the mysteries of the universe and our place within it.
