Subjective vs Objective

There are many words in the English language that sound very similar but have completely opposite meanings. One of the examples is the Subjective vs Objective pair: with only a couple of letters different, these two words are actually antonyms.

MEANING

SUBJECTIVE information is anything that is based on personal opinion, judgment, feelings, or point of view.

MEANING

OBJECTIVE information is factual and based on observations and measurements.

Are you struggling to answer subjective and objective questions effectively? Don't worry, you're not alone. Many students find these types of questions challenging, but with the right strategies and practice, you can master them and improve your exam performance.

In this comprehensive article, we'll provide expert insights, tips, and practice questions to help you understand and answer subjective and objective questions with confidence. So, let's dive in!

Types of Subjective and Objective Questions

Subjective Questions

Subjective questions are open-ended and require you to provide your own unique response. They typically ask for your opinion, interpretation, or analysis.

Examples of subjective questions:

- Discuss the significance of the Industrial Revolution.
- Analyze the motivations of the main characters in a novel.
- Evaluate the effectiveness of a particular government policy.

Objective Questions

Objective questions are closed-ended and have a fixed number of possible answers. They typically ask for factual information or require you to apply a specific concept or skill.

Examples of objective questions:

- What is the capital of France?
- Which of the following is not a primary color?
- Calculate the area of a triangle with a base of 10 cm and a height of 8 cm.

Strategies for Answering Subjective Questions

Here are some effective strategies for answering subjective questions:

- **Read the question carefully.** Make sure you understand what the question is asking for before you start writing.
- **Brainstorm your ideas.** Before you start writing, take a few minutes to brainstorm your ideas and organize your thoughts.
- **Start with a strong thesis statement.** Your thesis statement should clearly state your main argument or point of view.
- **Provide evidence to support your claims.** Back up your arguments with specific examples, facts, or data.
- **Use clear and concise language.** Write in a clear and concise manner, avoiding vague or ambiguous language.
- **Edit and proofread your work.** Once you're finished writing, take some time to edit and proofread your work for any errors.

Strategies for Answering Objective Questions

Here are some effective strategies for answering objective questions:

- **Read the question carefully.** Make sure you understand what the question is asking for before you read the answer choices.
- **Eliminate obvious wrong answers.** If there are any answer choices that are clearly wrong, eliminate them first.
- **Consider the context.** If the question is part of a larger set of questions, consider the context to help you narrow down the correct answer.
- **Use process of elimination.** If you can't immediately identify the correct answer, use process of elimination to rule out the wrong answers.
- **Guess if necessary.** If you're running out of time, it's better to guess than leave the question blank.

Practice Questions

To help you solidify your understanding of subjective and objective questions, here are some practice questions for you to try:

Objective Questions
