

Stormwater: An Asset, Not a Liability

By John Waterbury

Stormwater runoff is often seen as a nuisance, a problem that needs to be solved. But what if we could change our perspective on stormwater and see it as an asset, a resource that can be used to benefit our communities?

In his groundbreaking book, *Stormwater: An Asset, Not a Liability*, John Waterbury presents a compelling case for why we need to rethink the way we manage stormwater. Waterbury argues that stormwater is not just a waste product; it is a valuable resource that can be used to improve our quality of life and build more sustainable communities.

Chapter 1: The Problem with Stormwater

In the first chapter of his book, Waterbury discusses the problems that stormwater can cause. He explains how stormwater runoff can lead to

flooding, erosion, and pollution. He also discusses the impact that stormwater can have on our infrastructure and our economy.

Chapter 2: The Solution: Green Infrastructure

In the second chapter of his book, Waterbury presents a solution to the problem of stormwater: green infrastructure. Green infrastructure is a sustainable approach to stormwater management that uses plants, soils, and other natural materials to manage stormwater runoff.

Waterbury discusses the many benefits of green infrastructure, including its ability to reduce flooding, erosion, and pollution. He also discusses the economic benefits of green infrastructure, such as its ability to create jobs and improve property values.

Chapter 3: Case Studies

In the third chapter of his book, Waterbury presents case studies of green infrastructure projects from around the world. These case studies demonstrate the effectiveness of green infrastructure in managing stormwater and improving the quality of life in communities.

Chapter 4: The Future of Stormwater Management

In the fourth and final chapter of his book, Waterbury discusses the future of stormwater management. He argues that we need to move away from our traditional approach to stormwater management, which is based on concrete and pipes, and adopt a more sustainable approach that is based on green infrastructure.

Waterbury believes that green infrastructure is the key to creating more sustainable and resilient communities. He argues that we need to invest in

green infrastructure projects now in Free Download to avoid the costly consequences of stormwater pollution and flooding in the future.

Stormwater: An Asset, Not a Liability is a must-read for anyone who is interested in sustainable stormwater management. Waterbury's book provides a clear and concise overview of the problem of stormwater and the solution of green infrastructure. He also provides inspiring case studies of green infrastructure projects from around the world.

If you are looking for a way to make a positive impact on your community and the environment, I encourage you to read *Stormwater: An Asset, Not a Liability*. This book will change the way you think about stormwater and inspire you to take action to create a more sustainable future.

About the Author

John Waterbury is a leading expert on stormwater management. He is the author of several books and articles on the topic, and he has worked on stormwater management projects around the world.

Waterbury is a strong advocate for green infrastructure. He believes that green infrastructure is the key to creating more sustainable and resilient communities.
